## Concierge Briefing

The breakfast terrace is loud this morning, clinking cutlery, espresso machines, the usual chatter. One guest couldn't help but linger at a nearby table, seeing more of a conversation than they were meant to.

When the table's occupant stepped away for a refill, they seized the moment and grabbed a screenshot before it could disappear. Somewhere in that conversation is enough to track down an account nobody was supposed to find.

## @0xMia's STORY

@0xMia · posted 40 min after room unlock

"the breakfast crowd really said the quiet part out loud this morning 🗨️ y'all need to actually READ what they said, not just skim it #HackerHolidays"

# Introduction

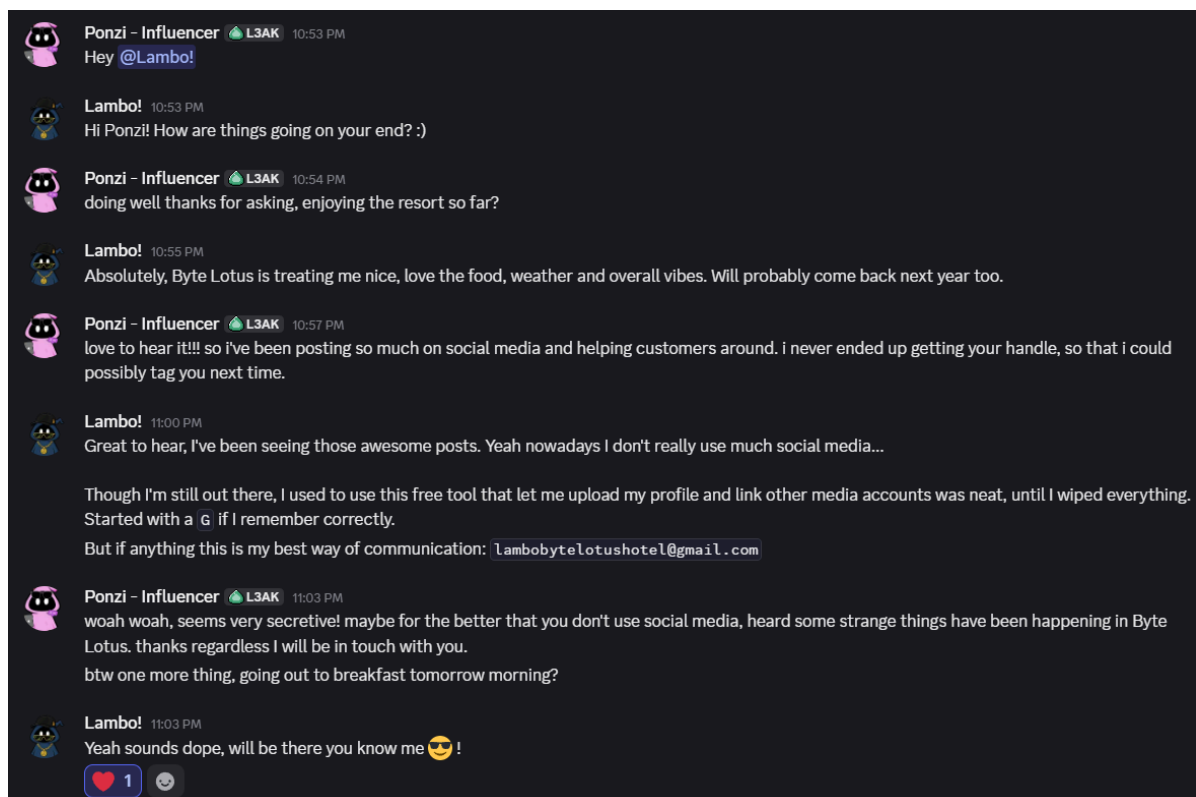

This is an Easy-difficulty OSINT room. Here, our basic goal is to find Lambo's profile and get the flag. There's a clue in the conversation given in the Task Files, and the two most important clues are:

1. The application we have to use starts with the letter "G"
2. Lambo's email ID is [lambobytelotushotel@gmail.com](mailto:lambobytelotushotel@gmail.com)

Now let's get into how to get the final flag!!

## Step 1: Reading the Conversation

In this first step, let's download the Task Files they gave us. Now, extract it and open the Conversation.

Here, the important info is:

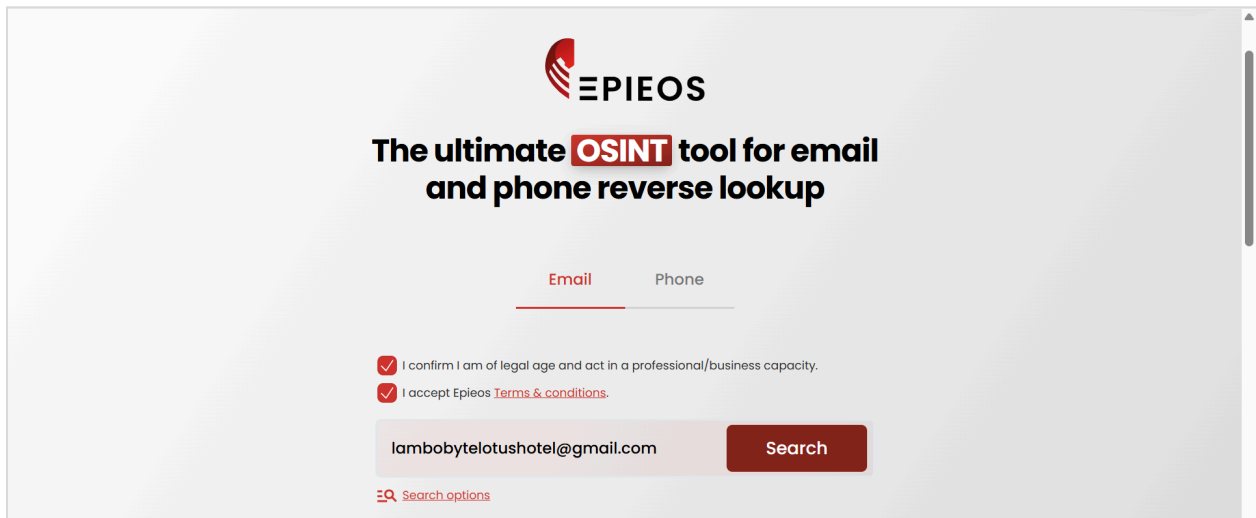

*“Though I’m still out there, I used to use this **free tool that let me upload my profile and link other media accounts** was neat, until I wiped everything. **Started with a G** if I remember correctly.*

*But if anything this is my best way of communication: **lambobytelotushotel@gmail.com**”*

...

## Step 2: Email Lookup

In this step, let's do an email reverse lookup on the email ID we got from the Task Files, using the **EPIEOS** OSINT tool.

Here, in the search bar, enter the email ID [lambobytelotushotel@gmail.com](mailto:lambobytelotushotel@gmail.com) and hit enter. After getting the result, download it in **PDF** format and check for the application it is linked to that matches the description we observed in **Step 2**

Results from a reverse lookup conducted  
on <https://www.epieos.com>

Query

lambobytelotushotel@gmail.com

### Table of contents

ALPHABETICALLY SORTED

[google](#)

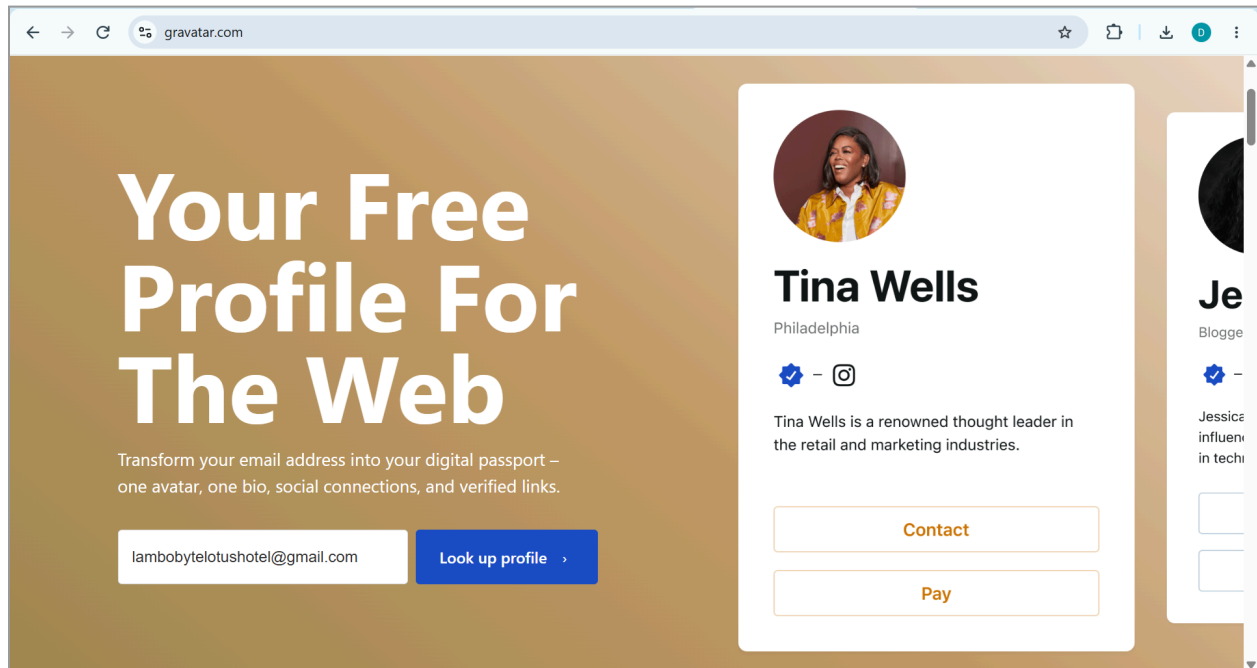

[gravatar](#)

In the result, the application that matches the description is **GRAVATAR**

...

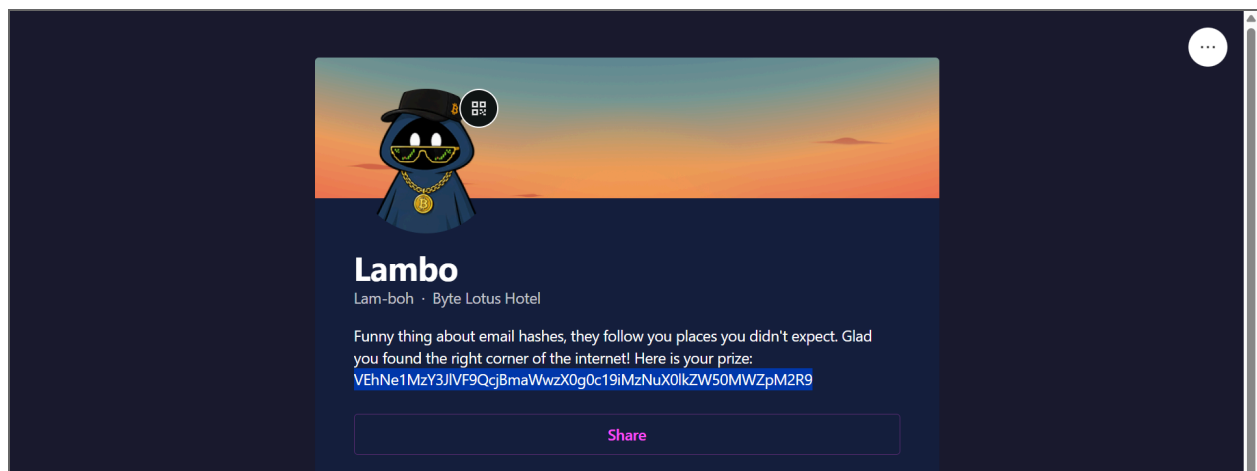

## Step 3: Capture the Flag

Since we got the application name, let's navigate to Gravatar and search for the email ID there.

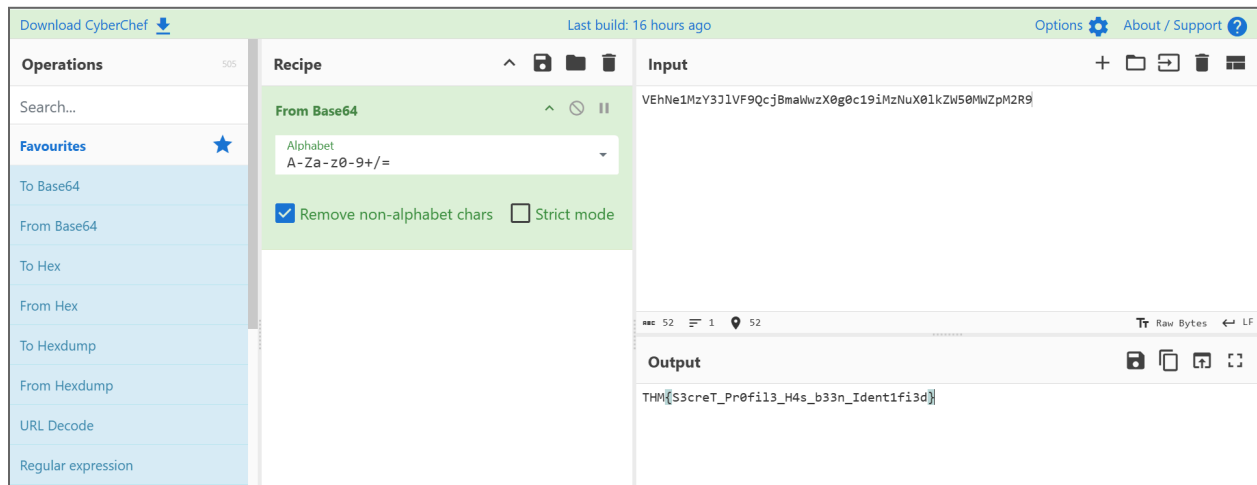

Now, you will get Lambo's profile with the flag in encoded form:

**VEhNe1MzY3JlVF9QcjBmaWwzX0g0c19iMzNuX0lkZW50MWZpM2R9**

Now, to get the actual flag, let's decode this text. For that, navigate to CyberChef (a versatile tool used for encoding, decoding, and data analysis, often used to identify and convert data between formats) and decode it.

Voila!! You got the Flag: **THM{S3creT\_Pr0fil3\_H4s\_b33n\_Ident1fi3d}**
